

Submission in follow-up to HRC resolution 19/34 "The right to development"

IRAQ

in reference to your letter ( ١٢/أ/٣//٩٠٢ ) in ٢٥/١٢/٢٠١١ regarding the norms and instruments of right of development , we would like to say the followings :-

First suggestion/ The right of development should be based on the terminology of right, in other words , the beneficiaries of development should include the staff and directors taking in consideration that human being is the centre of development process with collaboration of civil societies.

So , the objective is to grant the human beings the strength and capability to promote their lives and societies , however the human beings are not negative collaborators but supporters in the process of development , in other words , the main objective is to promote the awareness campaign especially aimed towards diverse categories especially in countryside and rehabilitate them in a bid not to creating totalitarian power in decision – making .

Second Suggestion /

It's very necessary to engage the diverse spectra of society as civil societies and associations , political factions , women , youths , however this participation should be given the real and active hope of transparency and to conduct the wide , open bilateral dialogue and how to address the outstanding issues .

Third suggestions /

It 's very significant to find solutions for the standing controversies between NGO's and governments through the mutual partnership between those two parties , however the dependency of the partners are needed since the collaboration and partnership between governments and civil societies is essential.

Fourth Suggestion/

The equality and non- discrimination is so important and significant element of human rights principals, since we consider the comprehensive interest of equality is very essential for all , especially for vulnerable groups , women , minorities , displaced and others .

In other words, no marginalization for other categories , however the equality in opportunities is meaning getting access to fundamental resources , as education , sanitation service , food , housing , and access to work

Please accept my highest considerations.

Adel Khudyar Abass
